How to connect devices for Wi-Fi roaming inside UPB campus buildings

Requirements:
1. A device registered with the Systems and Network Office
2. Assigned SSID:
   a. **UPB-Faculty** - device registered under faculty members
   b. **UPB-Employee** - device registered under administrative staff and REPS
   c. **UPB-Student** - device registered under UP Baguio students
   d. **UPB-Guest** - all registered devices

Connect to Wi-Fi from One Building to Another

Follow these steps when you transfer locations/buildings inside UPB campus while connected to Wi-Fi.

1. If it is your first time to connect to Wi-Fi in that building/location, your device will show that you are still connected to your assigned SSID. However, you may experience connection issues such as slow internet speed.

2. To fix this problem, restart your Wi-Fi connection by turning it off and turning it back on. It should connect automatically to your assigned SSID after.

3. Once it successfully connects, you should not have any issues connecting to Wi-Fi from these locations because your device is already recognized.

Contact DIC or SNO if you are having issues connecting to Wi-Fi inside UPB campus buildings.

Thank You.
