# How to connect devices for Wi-Fi roaming inside UPB campus buildings

Requirements:
1. A device registered with the Systems and Network Office
2. Assigned SSID:
    a. **UPB-Faculty** - device registered under faculty members
    b. **UPB-Employee** - device registered under administrative staff and REPS
    c. **UPB-Student** - device registered under UP Baguio students
   d. **UPB-Guest** - all registered devices

Connect using Android

1. Open the Wi-Fi Settings of your device then swipe the button to the right to turn on Wi-Fi connection.
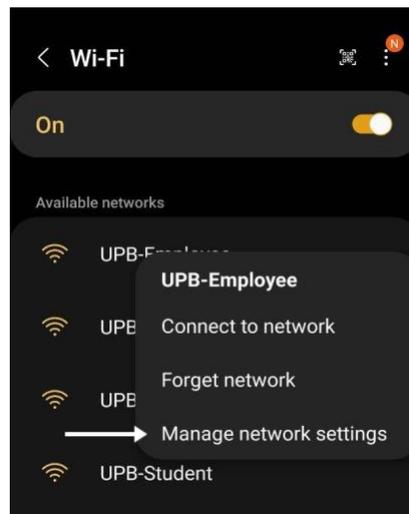

2. After turning on Wi-Fi, a list of available networks will appear. Locate your assigned SSID from this list. (Refer to the list of assigned SSID above.)
   Note: If you don't see your assigned SSID, refresh your Wi-Fi by swiping down or by repeating Step 1.

3. Hold-tap your assigned SSID and select *Manage network settings* or *Modify Network.*

4. Click ***View more*** or ***Advanced*** or ***Privacy*** just below *Auto reconnect* to reveal all network settings. After clicking this, ***MAC Address Type*** should appear.

5. Once **MAC Address Type** is shown, click it to display two options: **Randomised MAC** and **Phone MAC** or **Device MAC**. Select **Phone MAC/Device MAC** then click **Save** located at the bottom of the screen. Your device will now attempt to connect.

   Note: If it doesn't connect, click the arrow on top of the screen to go back then select the assigned SSID again.

6. Once it successfully connects, it should show the word *Connected* below the SSID.
